OFFICIAL TECHNICAL & ECONOMIC WHITEPAPER • VERSION 1.0

AURA PROTOCOL ($AUR)

Autonomous DeFi Yield & AI-Integrated Cross-Chain Wallet Infrastructure on BNB Smart Chain

Network: BNB Smart Chain Mainnet (Chain ID: 56) | Standard: BEP-20 | Total Supply: 100,000,000 $AUR

1. Executive Summary

AURA Protocol ($AUR) is a next-generation decentralized finance (*DeFi*) infrastructure operating natively on the **BNB Smart Chain (BSC Mainnet)**. The protocol unifies autonomous liquidity management powered by real-time price oracles, transparent presale distribution with *on-chain linear vesting*, and its flagship utility product: the **AURA AI Smart Wallet**.

By embedding an Artificial Intelligence routing engine (*AI Routing Engine*) directly inside a non-custodial wallet, AURA Protocol resolves one of Web3's primary adoption bottlenecks: cross-chain asset fragmentation. Users can execute **instant cross-chain swaps without manual bridging**, multi-hop gas overhead, or exposure to third-party bridge contract risks.

> **5-Stage Presale Funding Targets (Reference Oracle Rate: 1 BNB = $629.46):**
> • **Softcap:** $60,000 USD (equivalent to **95.32 BNB**) — secures initial DEX liquidity deployment and the AURA AI Wallet Alpha release.
> • **Hardcap:** $150,000 USD (equivalent to **238.30 BNB**) — fully funds multi-chain network expansion and comprehensive security audits.

2. Industry Challenges & AURA Technological Solutions

Current Multi-Chain Fragmentation Challenges

The modern blockchain landscape is fragmented across dozens of isolated networks, including BNB Chain, Ethereum, Arbitrum, Base, Polygon, and Solana. Moving value across chains currently forces users to navigate external bridge interfaces, wait up to tens of minutes for block finality, manage confusing *wrapped* asset standards, and acquire native gas tokens on every destination network beforehand.

Core Solution: AURA AI Wallet (Zero-Manual Bridge Swap)

AURA Smart Wallet eliminates these technical barriers through an *Intent-Based Cross-Chain Execution* architecture driven by artificial intelligence. Users simply select the source asset and destination token within a single wallet interface; AURA's AI engine autonomously settles the cross-chain liquidity transfer behind the scenes within seconds.

Core Feature	Technological Mechanism	User Benefit
Instant Cross-Chain Swap (No Manual Bridge)	Automated cross-chain liquidity settlement via a decentralized solver network without locking assets manually on external bridge portals.	Cross-network token swaps completed in a single click instantaneously.
AURA AI Route Optimizer	AI algorithms continuously scan liquidity depth across dozens of DEXs in real time and dynamically split order routing.	Minimal price slippage and optimal execution rates on every transaction.
Unified Gas Abstraction	Automatically allocates a micro-fraction of the swap value to cover gas fees on the destination blockchain.	Transact seamlessly on new networks without pre-funding native gas coins.
AI Security & Contract Guard	Automated pre-signature smart contract scanning to detect honeypots, hidden transfer taxes, and malicious approvals.	Proactive asset protection across every supported blockchain network.

3. $AUR Token Utility Within the Ecosystem

The **$AUR** token serves as the core economic engine across all protocol layers and the AURA AI Wallet application:

- **Up to 0% Transaction Fee Discounts:** $AUR holders and stakers inside AURA Wallet unlock tiered fee reductions on instant cross-chain swaps based on token holdings.
- **AI Pro Analytics & Automated Execution:** Unlocks advanced AI liquidity signal modules and automated *DeFi yield* routing strategies directly inside the wallet.
- **Staking & Protocol Revenue Sharing:** A dedicated portion of cross-chain swap fees is redistributed to $AUR staking participants and allocated toward open-market liquidity buybacks.
- **Protocol Governance:** Grants community voting rights over new blockchain network integrations and ecosystem incentive allocations.

4. Smart Contract Specifications & Tokenomics

All token supply parameters, Chainlink Oracle BNB price feeds, and presale vesting schedules are permanently encoded on BNB Smart Chain Mainnet with a strictly enforced fixed cap (*Non-Mintable Fixed Supply*).

Technical Parameter	On-Chain Specification
Token Name & Symbol	AURA Protocol (**$AUR**)
Blockchain Network	BNB Smart Chain Mainnet (Chain ID: 56 / BEP-20)
Maximum Total Supply	100,000,000 $AUR (Fixed Supply)

Technical Parameter	On-Chain Specification
Presale & Vesting Contract Address	`0x346934429A93EE18dea648562CF8a7e9407DBb47`
DEX Listing Price (PancakeSwap V3)	$0.0125 USD per $AUR

Allocation Category	Share	Tokens ($AUR)	Vesting & Lock Schedule
Public Presale (5 Stages)	25%	25,000,000	20% unlocked at TGE, remaining 80% via on-chain linear vesting.
DEX Liquidity Pool	30%	30,000,000	Automatically locked (*Liquidity Lock*) for 12 months.
AI Wallet Ecosystem & Staking	20%	20,000,000	Phased distribution for user rewards & yield pools.
AI R&D & Infrastructure	15%	15,000,000	3-month cliff, followed by 18-month linear release.
Marketing & Strategic Partnerships	10%	10,000,000	10% at launch, remainder released progressively for exchange expansion.

5. 5-Stage Presale Structure (Softcap & Hardcap)

The public presale is structured across **5 Progressive Steps** with incremental price appreciation to reward early supporters ahead of the official PancakeSwap V3 listing at **$0.0125**. Contributions are accepted directly via **BNB (Native)** or **USDT (BEP-20)**.

Stage	$AUR Price	Token Allocation	Target Raise (USD)	BNB Equiv. (@$629.46)
Step 1 (Active)	$0.0045	5,555,556 $AUR	$25,000	39.72 BNB
Step 2	$0.0055	6,363,636 $AUR	$35,000	55.60 BNB
Step 3	$0.0065	4,615,385 $AUR	$30,000	47.66 BNB
Step 4	$0.0075	4,000,000 $AUR	$30,000	47.66 BNB
Step 5	$0.0085	3,529,412 $AUR	$30,000	47.66 BNB
Total Presale	**Listing $0.0125**	**24,063,989 $AUR**	**$150,000 (Hardcap)**	**238.30 BNB**

*Note: Completing Step 1 and Step 2 cumulatively achieves the **Softcap of $60,000 USD (95.32 BNB)**, guaranteeing full DEX liquidity deployment and the scheduled Alpha release of AURA AI Wallet.*

6. Development Roadmap

Development Phase	Key Milestones & Technical Deliverables
Phase 1: Foundation & Mainnet Presale	Deployment and verification of $AUR token and Presale Vesting smart contracts on BSC Mainnet; Chainlink BNB/USD Oracle integration; execution of the 5-stage public presale and global community onboarding.
Phase 2: TGE, DEX Listing & Wallet Alpha	Initial token claim activation (20% TGE); official listing of $AUR/BNB and $AUR/USDT pairs on PancakeSwap V3 ($0.0125) with a 12-month liquidity lock; Alpha launch of **AURA AI Wallet** supporting instant zero-manual-bridge swaps across EVM chains (BSC, Ethereum, Arbitrum, Base, Polygon).
Phase 3: Non-EVM Expansion & AI Yield	Integration of non-EVM networks (Solana & TON) into AURA Wallet's Zero-Manual Bridge engine; launch of $AUR staking with wallet fee revenue sharing; centralized exchange (CEX) listings and developer SDK release.
